

Material Management

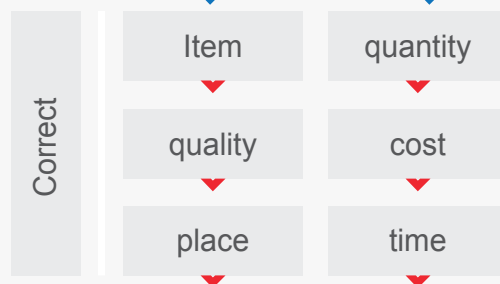

Effectively managing stock for maintenance efficiency

Benefits

- Stock costs are optimally managed and losses on old and obsolete stock are minimised.
- Maintenance work can take place as scheduled as the correct stock is available.
- Working conditions are improved as the store is clean and organised.
- Planned maintenance work and stock control and management are centralised on one system.
- Store operations and stock control are sustained through standards and procedures.
- Materials are managed effectively.
- The store manager is in control as he tracks stock and non-stock items through multiple stores.

An Effectively run store should have the correct item in the correct quantity and quality, at the correct cost in the correct place at the correct time for the optimal running of a business. Pragma's Spare Parts Administration business process will assist the maintenance store manager to increase asset management efficiency through effective cost savings, good housekeeping practices and support to technical departments.

Effectively run store

” *Pragma's Spare Parts Administration business process will assist the maintenance store manager to increase asset management efficiency through effective cost savings, good housekeeping practices and support to technical departments.*

Concerns Addressed

The typical concerns of outsourcing and contractor management are:

- What MRO items are in my store?
- How many MRO items are obsolete?
- How much money is tied up in MRO items?
- How accurate are my material master records?
- Do I have control over MRO item receiving, issuing and returns?
- Are MRO items available and efficiently supplied to internal customers?

Material Management

Effectively managing stock for maintenance efficiency

Key Features

Best practices

- Coordinating the cleaning and reorganisation of the store.
- Developing the client's store standards.
- Identifying all stock and non-stock items to be included in the material master.
- Configuring the material master
- Basic purchasing guidelines for clients without a formal procurement process.
- Receiving, inspecting and binning all MRO item deliveries.
- Issuing of requested MRO items to work teams and artisans.
- Receiving of returned, unused MRO items from work teams and artisans.
- Stock taking and reconciliation of MRO items in the store.

Within On Key Material Manager you can:

- Configure stock
- Do stock take, revaluation and stock transfer
- Link MRO items to maintenance tasks work orders and requisitions
- Automatic proposed stock ordering
- Purchase, receive, issue, return and credit items
- Capture and review item costs per work order/ asset
- Do stock analysis
- Interface to external ERP system.

An On Key - Syspro materials management integration module exists for Syspro clients that wish to use the Syspro materials management module instead of the On Key module.
